

PRODUCT DEVELOPMENT CHEMIST/SALES

Crown Roll Leaf, Inc.

Illinois Location

The selected candidate will work directly with executive management team to analyze opportunities for expansion by identifying sales/marketing group from a customer/market program and/or need. The selected candidate must have a deep understanding, knowledge and experience in terms used in the hot stamping and foil industry in order to update existing products and procedures that result in improved performance in both product and manufacturability. He/she will work directly with clients in determining appropriate products and/or chemistries necessary to meet client specific applications and develop such technologies as required by our clients, be in verbal contact with chemists at our main plant to report findings from the field and assist in the quality control department with decisions pertaining to new products and maintain accurate written records of all completed worksheets and work completed in the field. These records are part of reporting to management in order to analyze plant processes and chemical applications within a specific market segment. CV's should be emailed to noelle@crowrollleaf.com.
